NAME: ANKITA SINGH

REGISTRATION NUMBER:25MIP10031

**BRANCH: INTEGRATED M-TECH IN
DATA SCIENCE**

YEAR: 1ST YEAR

COURSE CODE: CSE0001

DATE:28-03-2026

INTRODUCTION

In this day and time, almost everything we do is associated to the use of the Internet and thus digital literacy is a significant concern for all of us.

As a Student Digital Ambassador in this project, I was able to experience what it takes to utilize different digital tools in an appropriate and responsible manner.

Among other activities such as making an infographic, building profiles, practicing coding, sending formal emails and dealing with cybercrime, this project helped me develop my digital skills.

While working on these tasks, I realized that many students, including myself, use the internet daily but are not always aware of best practices like maintaining privacy, avoiding online risks, or presenting themselves professionally online.

This project helped me become more aware of these important aspects. It also improved my practical skills, such as designing content, managing online profiles, and communicating in a formal manner.

Overall, this project was a useful learning experience that helped me understand the importance of digital literacy in both academic and real-life situations.

It has also encouraged me to be more careful, responsible, and confident while using digital technologies in the future.

TASK-1

In the course of this assignment, I designed a digital literacy awareness infographic using Canva. My primary goal in creating this infographic was to present key concepts such as the definition of digital literacy, online safety, and useful digital tools for students in a simple and understandable way.

I chose a simple template and used icons, headings, and bullet points in order to deliver information that could be quickly and easily understood. In my design, I also made sure to find a balance between the amount of text and images used, so the design does not seem cluttered.

In the beginning of this task, I struggled with which information to include and what to leave out as there were quite many points I considered to be important.

The difficult part was arranging everything within a specific space while making it aesthetically pleasing. I went through various layouts before I found a way to best arrange the information in a much more readable form.

I also learned how the right use of colour and font style will enhance readability.

Through this task, I have learned the importance of communicating ideas through visual representations. It also improved my creative skills and helped me to organize and present information in a good and interesting manner.

In conclusion, it was an interesting and confidence building experience.

TASK-2

For this assignment I have created and updated my profiles on GitHub, LinkedIn and Kaggle. Before I started this assignment, I had only a slight understanding of what I had to do, and I had absolutely no clue of what to do and how professional websites were generally used.

Through this assignment I have learned that GitHub is a place to store and share your projects with other people, LinkedIn is an online platform for professionals to build a professional online persona and network, and Kaggle is a website for practicing data science and working with a multitude of datasets.

On these websites, I filled out the necessary information about my college, my education and basic details about myself. I also created a simple readme file on GitHub with my name, branch and my objectives for this course.

This gave me a new perspective on how to present yourself in a professional manner online and is a very good starting point in building an online presence early in your college career that you can always develop upon in order to be presented in the best manner for future prospects such as internships.

For the future, I intend to keep my online profiles updated with more and more projects as well as with more skills and achievements as and when they come my way.

I also intend to familiarize myself more deeply with Kaggle, which will be very beneficial in improving my skill level with data science.

Overall, I was satisfied to finally take a positive step towards creating a strong digital portfolio, something that I had been putting off for a while.

TASK-3

I learned both coding practice and online collaboration tools in this task. I registered myself on Hacker Rank, which is the platform I use to practice coding.

Then I answered a question, which is the basic level one. Even though the question was very basic, it helped me to know the format of coding practice platform and how question is asked in stages. It also helped me to understand how coding is implemented logically, and it boosted me to practice many problems daily.

In the second part, I designed a google form on Digital literacy awareness. I used 5 questions and different types of questions like multiple choice and short answer, for example: online security, responsible use of internet and many others.

Designing a google form was an easy job, but forming such questions that are understandable as well as useful in a proper way require some thoughtfulness.

Then I linked my google form to a google sheet, that helps me to observe all the responses collected from that form which automatically got organized.

Through these tasks I came to know how these online tools can be helpful for conducting quizzes, taking feedback, surveys and similar things in academic life.

I also enhanced my skills to use technical aspects for different purpose and increase my confidence in using such online platform in the fields of study and collaboration.

The overall tasks are very informative and helped me to learn a lot about real life uses of online tools.

TASK-4

The objective of this task was to become familiar with the principles of business writing and the appropriate way to communicate via email.

I wrote two formal emails; one to inquire about an assignment extension and the other to request an interview for a summer internship. I was careful when writing these two emails to adhere to proper structure which included subject line, greeting, main body, and a formal sign-off. I also made an effort to keep both messages short, concise and straightforward.

I created a 'dos' and 'don'ts' list of responsible social media usage. This made me really think about human behaviour online and how actions online can have an impact on the individual's reputation.

For example, using bad language, thinking without acting or posting and uploading private information can be quite problematic down the road. I also noticed that once you post something, it's virtually impossible to delete it entirely.

One main lesson learned in this assignment was that communication on the internet should always be appropriate, clear, and polite. A single wrong message sent can leave a bad impression or cause major misinterpretations.

This assignment has helped to build up my writing abilities and my awareness when it comes to the appropriate way of communicating. I feel I will no longer struggle when sending formal e-mails.

TASK-5

This assignment gave me knowledge about cybercrime and how to avoid being a victim. I concentrated more on understanding the mechanisms behind cyber-crimes such as phishing or online payment frauds and how they could harm individuals.

I developed a case study and prevention checklist to raise awareness on these aspects. Throughout this task I realised that cyber-crimes are on the rise and they could affect any person who is careless enough.

During my research I was shocked to find out how easily people could be duped by the attackers with the help of the look-alike web-pages or emails or messages.

Most people blindly believe and fall prey to it thus losing money or personal details. I also came to know that student may also become victims since they are quite unaware. This has also motivated me to spread awareness and take precautions.

I will practice not to click on suspicious links or read phishing emails and messages and will be very cautious to avoid providing my banking details to unverified users through online transactions like UPI or money transfer.

This assignment enhanced my awareness and I am very conscious to secure myself. It motivated me to stay updated on how these scams are becoming increasingly sophisticated.

CONCLUSION

This project helped me understand the importance of digital literacy in a practical and meaningful way. Through different tasks, I learned how to create digital content, build a professional online presence, and communicate effectively using proper email etiquette.

I also explored coding platforms and collaboration tools, which improved my technical and problem-solving skills.

Another important learning was about cyber safety and how to protect personal information online.

I realized that being active on digital platforms also comes with responsibility. Overall, this project not only improved my knowledge but also made me more confident in using digital tools in a smart and safe manner.

These skills will be useful for my academic work as well as my future career.
